

Our **Traits Reports** are a fun way to explore how your DNA makes you unique.

The following concepts may help you understand your reports.

[Start](#)

Traits refer to features and characteristics of a person.

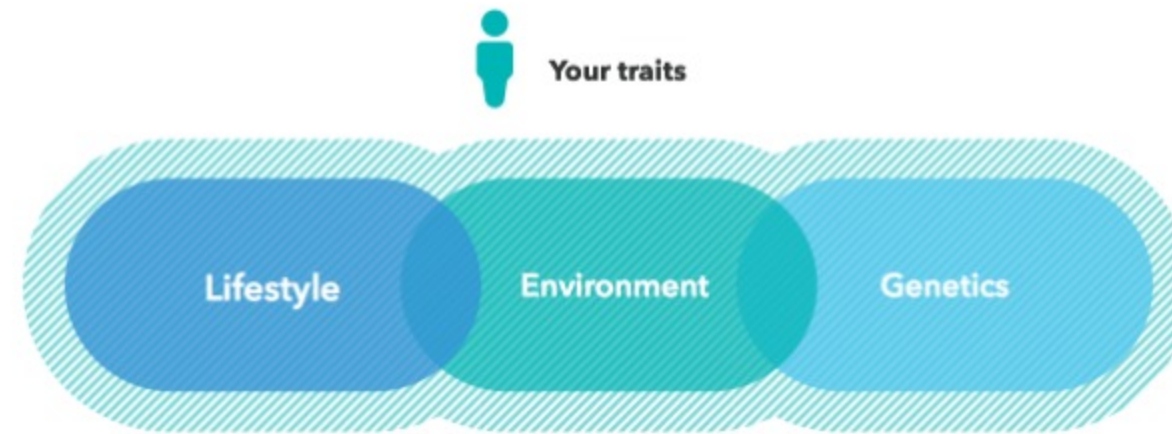

Traits include features like unibrow, blue eyes, and even sneezing in response to sunlight.

Back

Next

Traits are typically determined by interactions between your DNA, environment and lifestyle.

For example, what you eat and where you live can influence whether you like the taste of certain foods.

Back

Next

Variants in your DNA influence your traits.

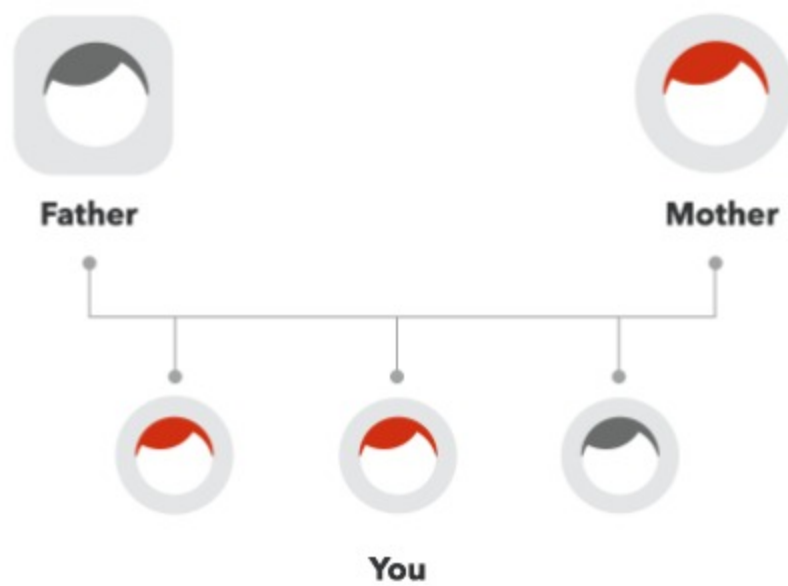

Some traits are largely determined by just a few variants, while others are influenced by hundreds of variants.

Back

Next

Since you inherit variants from your parents, your parents and siblings may also share the same traits.

Your traits are influenced by many factors including your DNA, environment and lifestyle.

Read your reports to explore your DNA's contribution.

Although our reports predict your genetic chances of having a trait, sometimes other factors can influence your actual result.
